

BUILDING AMERICA®

March 26, 2020

To Our Locomotive Usage Agreement (LUA) Customers,

The health and safety of our employees, customers, and communities are of utmost importance to Union Pacific. To that extent, we have implemented enhanced measures to minimize the spread of COVID-19 in Union Pacific locomotives.

Our mechanical team is following standard process to clean and disinfect locomotives every time a locomotive is serviced on a mechanical service track. In addition, Union Pacific is placing disinfecting solution in all locomotives and providing individual cleansing packs so that Union Pacific locomotive crews (engineers and conductors) are able to wipe down locomotive surface areas including throttles and arm rests.

While Union Pacific is taking additional measures to minimize the spread, if you have a specific concern you may conduct your own cleaning/disinfecting prior to operating a Union Pacific locomotive, either with the disinfecting solution that is provided in the locomotive or their own disinfecting solution. We ask, however, that you not clean the interior of the toilet room as certain cleaning products may interact with the chemicals used in locomotive toilets.

Union Pacific employees have been directed to follow best practices to prevent the spread of COVID-19 and will report suspected exposure to Union Pacific. Further details on these practices can be found at <https://www.up.com/employee/covid/index.htm>.

If Union Pacific becomes aware of a suspected COVID-19 exposure, an Occupational Health Nurse will determine whether cleaning/disinfecting is required and the Union Pacific Hazmat Team will coordinate any necessary cleaning.

We are confident these measures will ensure that locomotives delivered to customers will not pose a risk of spreading COVID-19. If you have further concerns please contact your Union Pacific representative.

Sincerely,

Marketing and Sales
